Barr's "Gold Medal" Daffodils

AWARDED

Thirty-three Gold Medals and a Ten Guinea Challenge Cup, Also many First-class Certificates and other high awards.

NEW CLASSIFICATION OF THE DAFFODIL.

For some years a general want was felt by Daffodil exhibitors for a wider classification of the Daffodil than the then existing one, which had not been found sufficiently elastic to take in several new forms of the Narcissus family raised by hybridists since the great Daffodil Conference of 1884. The Narcissus Committee of the Royal Horticultural Society was approached on the subject, and to meet the case appointed in 1909 a subcommittee to carefully go into the matter, and see how far the existing classification could be modified or altered so as to facilitate the placing of the many new seedlings now being raised. A good deal of time and careful study was given by the members of the subcommittee to the subject, and the revised classification which they brought forward in 1910 was almost unanimously accepted by the full Narcissus Committee of the Royal Horticultural Society. In the following pages we have adopted to a great extent this classification, which we hope will be of valuable assistance to exhibitors of Daffodils and to amateurs who desire to make a selection of distinct types. As will be seen, 10 distinct divisions have been made together with a section (Div. XI.) at the end to take in a few unclassed species and hybrids. With each division we have given its distinguishing character.

GENERAL INDEX.

39

CULTURE AND ADAPTATION OF THE DAFFODIL OUTDOORS.

Soil and its Treatment.—The Daffodil will thrive in any ordinary garden soil, but prefers a deep, rather moist loam. When the soil is of a dry and saudy nature, it should be deeply dug, if possible at least a season before planting the bulbs, well-decayed cow manure being added, and a potato or other vegetable or annual crop grown on the ground. Before the bulbs are planted a sprinkling of quick-lime should be spread on the surface and then dug in.

If it is not convenient to first take off a crop of Vegetables or Annuals, then, in digging, mix with the soil crushed bones at the rate of 1½ oz. to the square yard. The ammoniacal properties of stable manure are injurious to the Daffodil; considerable risk is therefore incurred by using it. On good retentive loamy soils stable manure is not required and should not be used, but a dressing of lime once in every three years, with an annual dressing of Basic Slag, at the rate of $7\frac{1}{2}$ oz. to the square yard, may prove beneficial.

FRESHLY DUG SOIL should be allowed to stand vacant two to three weeks before planting, to allow the ground to settle down, otherwise the freshly planted bulbs are sometimes drawn under considerably below their proper depth, and the bloom in consequence is apt to be weakened and retarded the first season.

The BEST AND SAFEST MANURES TO USE are Crushed Bones, Dissolved Bones, Basic Slag, or Phytobroma (for price see page 38). This should be applied at planting time, and may be mixed with the soil; the Crushed or Dissolved Bones may be applied at the rate of 6 cwt. to the acre, or 2 oz. to the square yard, and Basic Slag may be applied in same manner at the rate of 1 ton to the acre, or 72 oz. to the square yard. We recommend for light soils Crushed Bones (provided they are genuine) in preference to Basic Slag. On very poor and DRY SANDY SOILS we recommend in addition SULPHATE OF POTASH to Basic Siag. On very poor and DRY SANDY SOILS we recommend in addition SULPHATE OF POTASH (for price see page 38), to be sprinkled annually in the autumn over the surface of the ground, after planting, at the rate of 2 cwt. to the acre, or about $\frac{3}{4}$ oz. to the square yard. The potash not only increases the depth of colour in the flowers, but also helps to hold moisture in the soil, an essential condition to the perfect development of the Daffodil. In the case of bulbs which have not been lifted we recommend a top dressing (well hoed in) of Phytobroma or Dissolved Bones in November and again in March, at the rate of 3 oz. to the square yard.

IN EARLY SPRING, as soon as the Daffodils begin to show above ground, the surface soil should be well broken with a hoe, to sweeten it after the heavy winter rains; a handy tool for this purpose will be found offered on page 37. Where practicable it is advisable to cover the ground in November with some light covering material (the idea is to prevent the autumn rains from beating down the crust of the ground, and to break the severity of a sudden frost). We use for this purpose pulled heather; cut furze or gorse, however, answers the same purpose; cut fern or bracken is bad, as it lies too wet; old pea sticks laid across the ground are good, or on flower beds sprays or small branches of cut evergreens stuck into the ground answer the purpose and look decorative; these of course need renewing when they get shabby.

Do not mulch the beds with manure.

Planting and Lifting.—The best time to plant, to obtain the finest llowers, is early Autumn (as early as possible), although bulbs may be put in as late as Christmas with fairly satisfactory results; we have planted some Daffodils as late as the second week in February, and had some very good blooms the third week in May. We recommend, however, early planting for best results. The bulbs may be left undisturbed for years in ordinary good loamy soils, but on poor and light soils they are better lifted every two years, as soon as the foliage has died down, replanting the best bulbs either immediately or as early as is convenient. Never plant when the ground is wet and sticky. Do not put silver sand around the bulbs of Narcissi except in the case of N. corbularia.

DEPTH TO PLANT.—The average depth to plant is from 2 to 3 inches, that is to say, a covering of 2 to 3 inches of soil, but not more. As the bulbs vary considerably in size, according to the relative varieties, the best rule to go by is the bulb itself, which should be covered with soil once and a half its own depth, measuring the bulb from the collar of its neck to its actual base. On light sandy soils the bulbs may be planted a trille deeper than on heavy stiff soils, and in the North of England and in cold

localities they should be put in a little deeper than in the warmer southern districts.

Position and Grouping for Effect.—All Daffodils prefer partial shade, although most of them will grow equally well in the open. The varieties which are best grown in partial shade are indicated in the following pages by an *. In the flower border, to obtain the best effect, Daffodils should be planted in large groups of irregular outline, each group or clump to contain one variety only; avoid straight lines, circles, and symmetrical designs. Masses of Daffodils should always appear in the Hardy Flower border, where irregular and effective sweeps can be planted between the clumps of herbaceous plants which in their turn grow up and hide as well as shelter the Daffodil foliage while it is going to rest. In grouping Daffodils the season of flowering should be borne in mind, as the varieties bloom in succession from the end of February to the end of May, during which period, by a judicious selection, a constant succession of flowers can be maintained. On page 13 we denote the rotation of blooming.

Naturalising Daffodils in Grass, Etc.—All Daffodils may be planted in grass with perfect success. To produce the best effect, the three groups should be kept separate: thus the Star Narcissi should not be mixed with the Great Trumpets, nor Poet's Narcissi with the Star Narcissi. In planting, make the breaks large and bold, scattering the bulbs over the ground broadcast with the hand, and planting them where they fall. Avoid symmetrical lines or formal circles as far as possible, as these are not found in nature. In planting under trees, avoid places where the drip from the branches is greatest, also where the main roots of the trees come close to the surface.

DAFFODILS never look more beautiful or are seen to greater advantage than when growing on grassy slopes or banks, and we strongly recommend our customers to avail themselves of such situations

for naturalising Daffodils.

Varieties specially Suitable for Naturalising in Woodlands, Grasslands, Glades, Etc.. DELIGHTING IN PARTIAL SHADE.—The following are mostly free seeders, and will therefore spread naturally; they are mostly wild plants-Abscissus, Countess of Annesley, Excelsior, Golden Spur, Henry

Naturalising Daffodils in Grass, Etc.—continued.

Irving, Obvallaris, Spurius, Lent Lily, Princeps, Scoticus, Albicans, Pallidus Pracox, Moschatus of Haworth every pretty in grass), Queen of Spain (in our opinion the most beautiful of all for this purpose), and all varieties of Poëticus, including the old Double White. The Varieties underlined we do not recommend for the cultivated border, as they deteriorate the second year, while in woodlands, grass, or meadowland they llourish.

Varieties for Naturalising in Grasslands, Parks, Meadows, on Lawns, etc. -- The following fine trumpet varieties are all good strong growers, as well as being distinct and effective—Emperor, Empress, P. R. Barr, Golden Spur, Quben of Spain, W. P. Milner, Horsfieldh, Madame PLEMP, MRS. THOMPSON; of the chalice-cupped varieties the following are best suited to the purpose—Incomparabilis Brauty, Frank Miles, Stella superba, Sir Watkin; Leedsh M. M. De Graaff, Minnie Hume, and Mrs. Langtry; Barrh conspicuus, Flora Wilson, Crown Prince, Ellen Barr, Falstaff, John Bain, Odorus and O. Rugulosus; of the Poets' Navcissi for planting in grass we recommend Poeticus ornatus, Almira, Herrick, and Poetarum and the late Pheasant's Eye (Poeticus recurvus); of the double flowered daffodils, the Old Double Yellow (Telamonius PLENUS), BUTTER AND EGGS, EGGS AND BACON, and CODLINS AND CREAM may be used.

For Lawns and Tennis Courts which have to be mown early we recommend the dainty Minimus,

Cyclamineus. Minor, Nanus, and Lobularis. Being very early varieties the grass may be safely mown in May.

Varieties for Planting by the Water Side.—Daffodils produce a charming effect when growing at the water's edge. The following varieties we can strongly recommend for this purpose - Odorus and Odorus rugulosus, with their rush-like foliage and graceful golden flowers; Duchess of Westminster, John Bain, and the old late Pheasant's Eye Narcissus (Poeticus recurrus), with their graceful starry flowers; Emperor, P. R. Barr, and Empress, three noble trumpeters; Sir Watkin, Barrii conspicuus, Stella superba, Beauty, Frank Miles, and the Double White Poeticus or Gardenia-flowered Narcissus, cte. In choice spots near the water's edge the charming little Cyclamineus should be planted, as also the sulphur-coloured Hoop Petticoat Narcissus (N. Belbocodium citrinum), both of which luxuriate in moist grassland.

Method of Planting Daffodils in Grass.—We recommend for this work our Special Bulb PLANTER (see illustration, page 37). By the use of this implement the trouble of planting bulbs in grass is reduced to a minimum. It takes out a clean, circular piece of turf 2 to $2\frac{1}{2}$ inches in diameter, and of sufficient depth. On making the second hole this piece of turf is released from the planter and lies ready on the ground to cover the bulb with. The soil is not in any way tightly pressed and made hard, which is the case when an ordinary dibber is used, and the appearance of the grass is not spoilt; in fact, after planting 10,000 bulbs with this tool on a greensward, one could hardly detect that the grass had been touched. If the ground is very poor and thin, a compost of fresh soil with an abundance of Crushed Bones (7 lbs. to a bushel) or Phytobroma (3 lbs. to bushel) should be made and a little of the compost dropped into each hole before placing in the bulb, a little more should be given as a covering, and then the sod of turf be replaced and pressed down. The bulbs will then be given a fair start in their new quarters. (For price of Barr's Special Bulb Planter, see page 37.)

The Best Time for Planting in Grass is with the advent of the autumn rains, when the ground is in a fairly moist condition, it being impossible to plant whilst the ground is hard and solid from the summer heat; moreover, nothing is gained by planting in hot dry ground, to say nothing of the cost and labour of planting.

CUTTING DAFFODILS FOR DECORATION.

To obtain very fine blooms Daffodils should be cut in a young state, just when the bud is bursting, placed in water and allowed to expand in a greenhouse or sitting room. The blooms opened in this way are larger and finer in texture and purer in colour than those which develop out of doors.

CULTURE OF DAFFODILS IN POTS OR BOXES.

TIME OF POTTING.—Pot as early in autumn as possible to obtain the finest results and earliest blooms. THE BEST COMPOST to pot Dalfodils in is a mixture of two thirds good fibrous loam, and onethird old decayed leaf soil, with a sprinkling of sharp silver sand, adding 1 bs. of bone meal or 1 lb. Phytobroma (see page 38) to every bushed of soil, which mix well together before using. In all cases the soil used should be fresh and sweet; never pot in soil that is wet or sticky. In order to destroy all injurious insect life it is a good plan to sterilise potting soil before adding the Phytobroma or bonemeal; we recommend for this purpose the Kondine Soil Steriliser, price 40/- (full particulars on application), or small quantities of soif can be sterilised in a sack by pouring over it a large kettle of boiling water and then spreading out the soil to dry. This will prevent a great deal of after trouble from worms or insects attacking the bulb roots.

THE POTS should be carefully washed out with boiling water and wiped dry before using. Never pot in dirty or wet pots.

GOOD DRAINAGE should be secured by placing three or more pieces of charcoal (in preference to broken crocks) over the drainage hole, covering the charcoal or crocks with a little rough fibre from the loam. When boxes are used, the slit at bottom of box should be covered with pieces of charcoal, a good layer of rough fibrous loam or leaf soil placed at bottom of box to ensure perfect drainage.

COVERING THE BULBS.—The larger bulbs need not be quite covered with soil, the level of which should be half an inch below the rim of the pot to allow of watering when the bulbs are in growth. Bulbs of the miniature species should be covered with half an inch of soil.

AFTER POTTING, stand the pots or boxes outside in the open, on a firm bottom such as a bed of ashes or a gravel path to prevent the entrance of worms. They should then be surrounded and completely covered with Pcat-fibre, Cocoa Fibre, or old decayed leaf soil, the top of the pots being

Culture of Daffodils in Pots or Boxes-continued.

2 inches below the surface of the covering material. This will secure a natural and moist condition to the bulbs and encourage root action. So long as the pots remain buried they will require no watering.

THE POTS OR BOXES SHOULD REMAIN PLUNGED for a period of not less than twelve weeks, after

which first-early sorts (marked 1 in catalogue), such as GOLDEN SPUR, HENRY IRVING, OBVALLARIS, etc., may be transferred to a greenhouse or sitting-room where the night temperature does not exceed 55° and that of the day 60°. A higher temperature should not be given if well-developed blooms are wished for. If the pots are taken into a sitting-room they should be kept during the day in a sunny window and at all times should be protected from draughts and gas heat. Later-flowering Daffodils (marked in catalogue 2, 3, and 4) should be brought into warmth later and in succession, thus sorts marked 4 should not be removed from the plunging bed until February or March. No Daffodils will bear hard forcing or bottom heat. After the bulbs are out of the plunging bed. give the plants as much light and air as possible, and once a week a very little weak liquid manure water until they come into bloom.

Of the stronger growing sorts use three to six bulbs, according to size of bulb, for a pot measuring $4\frac{1}{2}$ to 6 inches in diameter; of the small miniature kinds, such as N. Minimus, Nanus, Minor, Cyclamineus, Triandrus, Iuncifolius, and Bulbocodiums, use twelve to eighteen bulbs for a 4½ to 6-inch pot. These small-flowered dwarf-growing species are most charming in pots or little shallow pans. The following may be had in bloom in January :- Minimus, Minor, Nanus, and Cyclamineus, and these may be mingled with Scilla sibirica and Chionodoxas, as both bloom at the same period and produce a charming contrast. For pot-culture the largest bulbs only of Minimus, Cyclamineus, Triandrus, and Corbularias should be used, as being collected when in bloom there is an uncertainty in their flowering the first season. The White Hoop Petticoat Narcissus should be potted in almost pure sand kept well moist, and if placed at once in a cold frame after

potting may be had in bloom by Christmas. (See Rock Garden Collections of Miniature Daffodils, page 8.)

If Daffodils are wanted in quantity for entting early in the season, plant thickly in boxes, giving same culture as recommended above for growing in pots. Of the best varieties to grow for early forcing in boxes, the following command a first place: First early sorts—Queen of Spain, Excelsior, Henry Irving, Victoria. Golden Spur, Sir Watkin, Telamonius plenus; Second early sorts—Emperor, Empress, Horsfieldii,

P. R. Barr, Barrii conspicuus, Beauty, Stella superba, Leedsii Bridesmaid, Fairy Queen, etc.

CULTURE OF DAFFODILS IN VASES AND BOWLS In Barr's New Peat-fibre Mixture.

A charming effect can be obtained by growing Daffodils in fancy vases or bowls, with or without drainage holes, by simply using our specially prepared Fertilised Peat-fibre, Shell and Charcoal Mixture (ready for use, 3c. 6d. per bushel, 1s. per peck); the mixture is light, clean, and nice to handle, and remains sweet; indeed, it is preferable to soil where Daffodils and other bulbs are grown in faney bowls and vases.

Narcissus Poelaz Elvira growing in Barr's Fertilised Fibre in a howl without drainage

Culture.-Fill the vase or bowl with the Fibre, Shell and Charcoal Mixture up to within a little below the rim, and plant the bulbs in the same manner as with ordinary potting soil, just covering them; the mixture may be shaken down into place after planting and lightly watered, but should not be pressed down tightly, or the bulbs will be forced upwards when root growth commences.

After planting, either of the following plans may be adopted:-

(a) The bowls or vases may be plunged outdoors on a bed of cocoa fibre or ashes, and covered entirely with cocoa fibre. leaving them thus for 10 to 12 weeks, when the bulbs will have made some top growth.

(b) Or the bowls may be plunged in a cold frame, airy cellar, or out-house instead of outdoors; with this treatment, however,

it will be necessary to occasionally give water.

(e) A third plan is to place the bowls after potting in a dark or moderately dark airy place, cool but not too cold; they must not be placed in a close cupboard or the bulbs will certainly suffer.

In the case of bowls plunged outdoors there will be no need to give any attention in the way of watering, etc., as they will, of course, have abundance of moisture from the autumn rains.

Where, however, the bulbs are not exposed to the rain, the bowls should be examined once or twice a week, care being taken that the fibre mixture is kept uniformly damp; but for the first week or two after planting water should be given very

hole. sparingly, sufficient only to keep the fibre damp enough to encourage root action. As soon as the bulbs are well rooted, water should be given more freely, the fibre mixture being then kept quite moist; if the mixture is allowed at any time to become dry, even for a day, the buds will go blind; should by any chance too much water have been given, the bowls may be drained by carefully tipping them on their side. If obtainable rain water is the best to use.

When the bulbs have made some top growth the bowls should be removed to the sunny window of a sitting-room, where they will get the morning sun, or be kept in a cool greenhouse close to the glass, it being necessary that they should be given sufficient light and air to prevent the foliage from becoming Draughts and gas heat must be carefully avoided.

No bottom heat should be given, and a temperature of 55° to 60° by day and 50° to 55° by night is

sufficient to obtain good blooms; the bulbs resent too warm a temperature.

For Bowls and Barr's New Fertilised Peat-fibre Mixture, see page 38.

COLLECTIONS OF DAFFODILS

FOR FLOWER BORDERS AND POT CULTURE.

Barr's 21/= Collection of Daffodils for Flower Borders.

The following varieties are all beautiful in the flower border, and the selection embracing early and late varieties gives a good succession of bloom. They are all suitable for pot culture and will give an equally fine display in the greenhouse or sitting-room.

ALL STRONGEST SELECTED BULBS.

6 Blcolor J. B. M. Camm 6 Emperor 6 Barrli John Baln Mdme. Plemp 6 Golden Spur Seagull 6 Leedsii Mrs. Langtry 6 Maximus 6 Incomp. 3 Bulbs each of the above 26 varieties for 10/6

SPECIAL COLLECTIONS OF DAFFODILS for Flower Borders made up to meet Customers' requirements, from £2 2s. up to £18 18s.

Barr's 42/= Collection of Daffodils for Pot Culture.

For Special Cultural Directions see pages 3 and 4.

The following Daffodils can be specially recommended for pot culture, and by gentle forcing a succession of bloom may be had through February and March, the selection containing early and later flowering varieties. If after flowering they are turned out of pots and carefully planted out (the ground being well watered previously, should it be dry) they will mostly flower well outdoors the following season.

Seedlings of Large-flowered Poeticus, per 100. 5/6; per doz. 10d.

Miniature Daffodils for the "Rock Garden."

The following are charming little subjects for rockwork, where their dainty flowers are seen to perfection. They should be left undisturbed for years, and, if happy, will soon establish themselves and afford a lovely picture in early spring. All the Corbularias (except Corbularia monophylla) and Cyclamineus like moisture, and should therefore be planted at the foot of the rockery. Corbularia monophylla flourishes in a warm dry sheltered situation, planted in almost pure sand; when coming into bloom give water freely. Triandrus albus (Angel's Tears) and Juncifolius delight in partial shade and a light gritty soil, and should be given a well-drained position. In the case of these Miniature Daffodils, the ground may be carpeted with close-growing surface-rooting plants, such as Arcnaria caspitosa, Thymus serpyllum vars., T. lanaginosus, Herniaria glabra, Mossy Saxifragas, etc.; these plants provide a natural protection for these little bulbs, besides keeping their dainty blooms from being splashed and soiled in rainy weather. We prefer, however, seeing these little gems peeping out of grass, and can supply seed of suitable fine dwarf grasses for sowing in September after planting the bulbs; this sowing will give a fine green carpet by the following spring when the Narcissi bloom.

For Daffodil Seed for Autumn Sowing, see page 37.

Barr's New Seedling Daffodils for 1913.

The following list of Daffodils comprises some of the finest novelties, and includes new scedlings of our own raising and many of the best raised by the Rev. G. H. Engleheart the late Rev. G. P. Haydon, Mr. E. M. Crosfield, Mr. J. C. Williams, Mr. P. D. Williams, Mrs. Backhouse, Mr. Henry Backhouse, Mr. Cave, Mr. Philip Worsley, and Mr. Dawson. We would specially draw attention to the following grand exhibition kinds: Ariel, Battleaxe, Bloodstone, Cæsar, Challenger, Chamois, Citrioná, Dresden, Empire, Eros, Florizel, Helios, Icereak, Jasper, Lewis Carrol, Marie Louise, Madonna, Memory, Mermaid, Messina, Michael, Michael Angelo, Pandora, Red Beacon, Ruby, Sir Galahad, Snow King, St. Olaf, Socrates, Timon, Volcano, and Wildfire—all of great beauty. In 1910 we purchased from Mr. Charles Dawson (who has given up growing Daffodils) his "Rosemorran" Daffodil Seedlings, containing many beautiful varieties, and at the same time took over his charming Cornish garden for the purpose of raising and rearing new seedlings. We have also transferred our Bulb Nurseries from Surblton to Taplow, where a fine display of Daffodils and Tulips may be seen in Spring.

Where we have a record, we give in inches the heights as registered at our Nurseries.

The relative qualities as we judge them are indicated by xx, xxx, xxxx, the highest quality flower being given the most marks. The figures after the names indicate the relative period of flowering, (1) being earliest, (6) being latest.

	(1) being earliest, (6) being latest.	flov	veri	ng,
	Adrastus (Incomparabilis) (6), xxx, new 1912, a handsome flower with white perianth and bold globular bright yellow cup, having a green centre and golden central halo, very late bloomer, ht. 21 in.	£		1. d

Barr's General List of Daffodils

For Alphabetical Index, see page 2 of Cover.

The following list of Daffodils embraces the highest class and most distinct varieties, surpassing in beauty and diversity all other assortments offered to the public. represents the cream of our Collection (over 500 kinds), and the best of the newest varieties in commerce up to 1913, several being offered to the public for the first time.

During the past few years we have rejected many of the older kinds which we considered had been superseded by better sorts at equally moderate prices; we can, however, generally supply such if required.

Time of Flowering.—The relative period of flowering of the different varieties and species out of doors we have denoted by means of numbers after the names, thus:

(1) 1st early, flowering from February to early March.

(2) 2nd early, flowering in March.

(3) Varieties flowering in mid-season, or early in April.

(4) Late-flowering varieties, from middle to end of April.

(5) Very late-flowering varieties, opening in May.

The actual period of blooming depends upon the season and district; thus in early districts (1) would commence in January and early February, while in colder districts end of February or beginning of March; but the natural rotation would remain the same.

Height.—In most cases we give also the heights in inches as recorded at our Nurseries.

Quality of Flower.—Each season we go carefully over our Daffodil collection with a view to recording the quality of each variety. This we indicate by x, xx, xxx, and xxxx, giving the most marks to those we judge to be the finest. We trust this record may be found useful to amateurs in making their selections.

Cultural Marks .- * The varieties marked thus * thrive best under the shade of deciduous trees, naturalised in grass in shady nooks, or on grassy slopes facing north. † indicates those kinds which should be selected where Daffodils are grown in pots or for

exhibition; they are, however, in most cases also splendid border varieties.

§ indicates those Daffodils which, besides being fine border plants, make a pretty effect when naturalised in grass; they are all strong growers and free bloomers.

Any Daffodil not offered in this Catalogue we can generally supply, if required.

Division I.—Trumpet Daffodils.

DISTINGUISHING CHARACTER .- Trumpet or crown as long as OR LONGER THAN THE PERIANTH SEGMENTS.

(A) YELLOW AND SULPHUR-COLOURED TRUMPET DAFFODILS.

Yarieties with Yellow, Lemon or Sulphur-coloured Trumpet and Perianth of same shade or lighter (but not white).

*Abscissus (4), x, a native of the French per doz. each. Pyrences, perianth sulphur-yellow, long straight s. d. s. yellow trumpet; the latest flowering of all Trumpet Daffodils, and recommended for naturalising in grass, woodlands, etc., where, when established, it flowers freely, ht. 12 in.

DIVISION II.—INCOMPARABILIS.

Large Chalice-Cupped Daffodils or Star Narcissi.

DISTINGUISHING CHARACTER.—Cup or crown measuring from ONE THIRD TO NEARLY THE LENGTH OF THE PERIANTH SEGMENTS.

The varieties of Narcissus Bernardi and Nelsoni, also the larger-flowered varieties of Engleheartii, are now placed under this division.

These beautiful Star Narcissi commence flowering in March, and furnish a succession of bloom throughout April. All are of elegant beauty, and as cut flowers are extensively used for furnishing vases and table bouquets. For this purpose they should be grown in quantity in boxes and forced for early bloom (see page 3). They make charming pot plants, while in beds and borders they are very showy and naturalised in grass they produce a graceful effect.

§Autocrat (3), xx, broad full yellow perianth, cup yellow, much expanded, ht. 20 in.

(reduced in size about half). per 1000, 55/-; per 100, 6/- o 10... — †Battleaxe. Example of a Flower in Division 111. BARRII SIDDINGTON (about two-thirds natural size).

DIVISION III.—BARRII.

Short-Cupped Daffodils, or Star Narcissi. (Including varieties hitherto classed as Burbidgei.)

DISTINGUISHING CHARACTER .- Cup or crown measuring less THAN ONE-THIRD THE LENGTH OF THE PERIANTH SEGMENTS (NOT IN-CLUDING POELICUS, WHICH FORMS A CLASS BY ITSELF).

For a long time trouble was being experienced in the placing of certain new seedlings under the Barrii and Burbidgei sections, as the two divisions ran so much into one another. The revising committee therefore decided to make only one section of them, retaining the name Barrii.

The chaste beauty of these shorter-cupped Narcissi is the more highly appreciated when the ent flowers are seen arranged in vases. The brilliancy of colouring in the cups of some, and the dainty elegance of others, render them all more or less valuable exhibition flowers. The cheaper kinds we can strongly recommend for beds and borders, and for naturalising in grass, woodlands, per doz, each wild gardens, etc.

DIVISION IV.—LEEDSII.

Eucharis-flowered or Silver-White Fragrant Star Narcissi.

Comprising all the Star Narcissi (large chalice-cupped and short-cupped) which have pure white or silvery white perianth segments and cup or crown white, cream, buff-orange, apricot or pale citron.

In the working out of the new classification, the revising committee felt that it would be unwise to break up this section and distribute it among the Incomparabilis and Barrii forms, seeing how distinct a "colour" section it was, and how well known to all Daffodil growers.

These chaste and beautiful Daffodils are highly prized for indoor decoration, while to cut for bouquets their fragrant flowers are greatly in demand. Plant 3 or 5 bulbs in a 5-inch pot. In flower beds and borders they are most charming, while naturalised in grass they produce a lovely effect.

VARCISSUS LEEDSII—continued.		per	doz, e	ac

DIV. V.—TRIANDRUS AND TRIANDRUS HYBRIDS.

Under this division are placed Triandrus varieties and all hybrids obviously containing Triandrus blood, such as Queen of Spain (a wild Triandrus Hybrid), Agnes Harvey, Bennett-Poë, Earl Grey, etc.

The introduction of Triandrus blood in hybridising has resulted in such a very distinct group of hybrids that the Classification Committee of the R.H.S. deemed it advisable to make one section of them. For grace and beauty they are unsurpassed. We recommend them being given a situation partly shaded by trees, and if a little very fine dwarf grass seed is sown amongst them, the beauty of their flowers is enhanced. Once planted they may remain undisturbed for years.

TRIANDRUS ALBUS ON ROCKWORK.

NARCISSUS TRIANDRUS.

The Cyclamen-flowered Daffodils with reflexing perianth.

THE DAINTY LITTLE "ANGEL'S TEARS" DAFFODIL (Triandrus albus) was found by the late Mr. Peter Barr on the mountains of Portugal and Spain, growing in very hard, firm, fine gritty soil, sometimes in the narrowest fissures of granite and slatestone rocks. All in this section make lovely little pot plants, and grown thus should be given cold frame culture. Established on rockwork they form a picture full of grace and beauty. They prefer shade, a gritty soil, and a well-drained position.

per doz. each

†**Triandrus albus** (3), an exquisitely beautiful little species, appropriately called the "Angel's **Tears**" Daffodil, of slender growth, and produces a cluster of elegant little creamy white flowers with globular cup and perianth reflexing as in the Cyclamen, ht. 7 in. It was found by the late Mr. Peter

Bair on the mountains of Portugal and Spain, growing in very hard, firm, fine gritty soil, sometimes in the narrowest fissures of granite and slatestone rocks. It makes a lovely little pot plant (three or more bulbs in a pot), and grown thus should be given cold frame culture. Established on rockwork it forms a picture full of grace and beauty. As we have to depend upon collected bulbs for our annual supply, and these have to be taken up while the foliage is still green, a proportion may possibly not bloom the first season. The bulbs should therefore be left undisturbed to establish themselves

	\$\forall Queen of Spain (4), xxx, found by the late Mr. Peter Barr in Spain. One of the most beautiful, distinct, and graceful Daffodils in cultivation, and unsurpassed either for bedding, pot or vase culture, or for naturalising in woodlands, etc. The flowers vary slightly in size, but all are of a uniform soft, delicate, clear yellow, with a gracefully reflexing perianth, trumpet of distinct and elegant form, ht. 12 in. Naturalised in grass under trees, this Daffodil forms a delightful feature in the garden. It also adapts itself readily to bowl culture in Fertilised Peat-fibre, Shell, and Charcoal mixture, or damp pebbles and gravel, and grown thus affords an artistic decoration for the sitting-room. As we have to depend upon collected bulbs for our annual supply, and these have to be taken up while the foliage is still green, there is a possibility that all the bulbs may not bloom the first season, but a fair proportion will

DIVISION VI.—CYCLAMINEUS & CYCLAMINEUS HYBRIDS.

Secing that **Cyclamineus** blood, like that of **Triandrus**, imparts such a distinct form to Daffodils, a separate division has been made for its hybrids. It has been used by many hybridisers as a parent, but as a rule the progeny has not been long-lived. It is possible, however, that we may yet obtain hybrids with a stronger constitution to come under this division.

Cyclamineus (1), the Yellow Cyclamen flowered Daffodil.

per doz. each.

NARCISSUS CYCLAMINEUS ESTABLISHED ON ROCKWORK.

This beautiful little Daffodil was re-introduced into cultivation in 1887 by A. W. Tait. Esq., of Oporto, after being lost sight of for 200 to 300 years. It is the earliest of all Daffodils and is a charming elegant little flower of very distinct form; the trumpet is rich vellow, straight and tube-like, elegantly serrated at mouth, while the perianth is reflexed as in a Cyclamen. A valuable little species for pot-culture, edgings, rockwork, and to naturalise in grass and shady nooks, or at the water's edge; it delights in a dampish sandy peat soil, ht. 6 in., FIRST-CLASS CERTIFICATE R.H.S. As we have to depend for our annual supply upon collected bulbs, and these have to be taken up while the foliage is still green, they are not all likely to bloom the first season, but a fair proportion will

NARCISSUS POETAZ-NEW HYBRID POLYANTHUS NARCISSI.

New hybrids of Poeticus Ornatus × Best Forms of Polyanthus Narcissi.

A fine new race of Daffodils, resulting from a cross between *Poëticus ornatus* and the finest varieties of *Polyanthus* or *Bunch-flowered Narcissi*, the Poëticus being the seed-bearing parent. The plants are tall and vigorous growers, bearing heads of large well-formed flowers, deliciously fragrant; they are much finer than the common Polyanthus Narcissi, and have the advantage of being much hardier. In pots or the flower border they are very decorative, while the flowers are highly prized for cutting.

being much harder. In poss of the nower border they are very decorative, with	e tii	ic nov	YCIS

Miniature Daffodils, flowering soon from seed, all beautiful on rockwork:

USEFUL TOOLS FOR BULB PLANTING, ETC.

Barr's Special Bulb Planter (Regd. 548091), specially designed for planting Daffodils and other bulbs in grass. This tool cuts and lifts a clean circular piece of turf which is released from the cup when the second hole is made, and lies ready at hand to fill in the holes when the bulbs have been

ady at hand to fill in the holes when the bulbs have been put in, it being only necessary to remove a little of the soil from the bottom of the soil. A time must be chosen for planting when the ground has become softened after early autumn rains and not when in a hard and baked condition, as it is then impossible to use this or indeed any other tool with success. By the use of BARR'S SPECIAL BULB PLANTER a large quantity of bulbs may be planted in a very short time, and without the least

disturbance of the sward. The length of the tool is 38 inches over all, weight about $3\frac{1}{2}$ lbs. The cup is manufactured from high-class hardened steel and always carries a keen cutting edge.

Supplied in 3 sizes of cup:—To cut out a circular hole 2, $2\frac{1}{4}$, or $2\frac{1}{2}$ inches diameter, each 10/6.

We shall send the medium size $(2\frac{1}{4} \text{ in.})$ if no instructions to the contrary are given.

Barr's Special Bulb Dibber (Regd. 468878), specially designed for dibbling bulbs into borders, etc.; steel shod, with strong iron tread and cross wooden handle; a good strong heavy tool, weight about 6\frac{3}{6} lbs, length 36 inches over all. 9/6 each.

Barr's Special Bulb Trowel, made of best steel, specially designed for lifting and planting bulbs, etc. It will be found of great value for general garden purposes, and far in advance of the old-fashioned trowel. 2/9 each.

Garden Trowel, ordinary pattern, riveted steel, half bright and blue, superior quality, 5 in., 6d.; 6 in., 7d.; 7 in., 9d. each.

,, ,, ., ,, solid cast steel, all bright, very finest quality, 5 in., 1/2; 6 in., 1/3; 7 in., 1/6 each.

Fern ,, bright steel and blued, best make, 2/- each. ,, ,, ,, ,, with leather sheath, 2/9 each.

New Pattern Daffodil Hoe, a very useful tool for breaking the surface soil in the Flower Border during dry weather, and especially in early spring when Daffodils are just showing; also a useful weeding tool. With 3 ft. handle (41 inches over all, and weight under 1 lb.) 1/9 each, with short handle (12½ inches), 1/3 each.

Hybridising Tweezers, suitable for easily removing pollen from Daffoldi flowers, per pair, 2s. 6d.

A Full List of Garden Requisites sent on application.

BARR'S SPECIAL METAL LABELS FOR DAFFODILS, Etc.

With Raised Letters.

No. 1, with solid metal shank, about 9 inches long. We specially recommend this for beds and borders. 4d. each.

No. 2, with stout wire stem, 6 or 9 inches long: specially suitable for pots, etc. (in ordering please state whether a short or long shank is required). 3d. each.

Ditto, with 12-inch stem, 4d. each.

No. 3, for Suspending, 3d. cach.

The above prices include the stamping of any name required.

These special metal labels are not kept in stock, being made only to order. The time taken to execute an order is generally from 2 to 3 weeks.

Manures, Soils, Fibre, Vases & Bowls for Daffodils.

Barr's Phytobroma, the best Manure for Daffodils, Hyacinths, Tulips, etc., and for Flower Borders generally. It should be mixed with the soil below the bulbs at planting time at the rate of 2 to 3 ozs. to the square yard, and in spring, when the bulbs are showing above ground a top-dressing may be given of 3 oz. to the square yard. For Pots, mix Phytobroma with the soil, to be used at the rate of 1 lb. to the bushel, and in Spring, when growth is showing, top-dress once a fortnight, using a small teaspoonful and well mixing with surface soil. 2-lb. tin, 1/-; 7 lb. 2/6; 14 lb. 4/6; 28 lb. 7/6; 56 lb. 12/6; 1 ewt. 21/-.

Basic Slag, per cwt. 6/6; per 14 lb. 1/-.

Bone Meal (Genuine Fine Crushed Bones), best quality, per cwt. 12/6; per 7 lbs. 1/-.

Pure Dissolved Bones, best quality, per cwt. 12/6; 7 lbs. 1/-

Sulphate of Potash, per cwt. 21/-; per 28 lbs. 6/-; per 7 lbs. 1/9.

Barr's Specially Mixed Potting Soil, containing a suitable quantity of Phytobroma, 2/6 per bushel (bags free).

Barr's New Peat-fibre, Shell, and Charcoal Mixture, ready mixed for use, a specially prepared mixture suitable for growing bulbs in vases, bowls, jardinets, etc. (for cultural directions, etc., see page 4). 3/6 per bushel; I/- per peck (hags free).

Peat-fibre, specially recommended for plunging bowls, pots, etc., and as a winter mulch to bulb-beds, etc., per bushel, 1/6; 3 bushels for 4/- (bags free and full measure guaranteed).

Cocoa Fibre for plunging pots and covering beds in winter, per bushel, 1/3: 3 bushels for 3/6 (bags free and full measure guaranteed).

Small Pebbles and Charcoal, 6d. per quart; 3/6 per peck.

Charcoal (fine twig), per pcck 1/-; per bushel 3/6.

Bulb Bowls. We have had special little vases made for us by Messrs. Doulton for growing Daffodils and other spring bulbs in our Fertilised Fibre and Charcoal Mixture. They are of elegant shape, of neutral art green and drab shades, and without drainage holes, thus saving the use of saucers; useful for growing not only Daffodils in, but also Tulips, Hyacinths, Crocuses, early Scillas, Snowdrops, Chionodoxas, and Lily of the Valley, also the charming winter-flowering Irises—reticulata, etc., either for table decoration or the greenhouse. During summer these bowls are very useful for holding cut flowers, etc. All Daffodils which may be grown in pots may also be grown in these fancy bowls, and in the foregoing pages we have indicated thus † those kinds most suitable for the purpose.

Barr's "Doulton Ware" Bulb Bowls.

Glazed, in dark or light green shades.

Unglazed, neutral drab shade.
